```

The screenshot shows the macOS System Information window for a MacBook Air (11-inch, Mid 2011) running macOS High Sierra (Version 10.13.2). The window has a title bar with standard macOS window controls (red, yellow, grey buttons) and a navigation bar with tabs for Overview, Displays, Storage, Support, and Service. The Overview tab is selected. On the left, there is a circular icon representing the system. On the right, the system name and version are displayed, followed by a list of hardware specifications: Processor (1.8 GHz Intel Core i7), Memory (4 GB 1333 MHz DDR3), Startup Disk (MBA-1TB), Graphics (Intel HD Graphics 3000 384 MB), and Serial Number (C02G26W6DRHF). At the bottom, there are two buttons: "System Report..." and "Software Update...".

Every Parallels Desktop® for Mac user wants their Windows applications to run as fast as possible.

1. [opengl](#)
2. [opengl vs directx](#)
3. [opengl download windows 10](#)

There are many factors that contribute to the overall speed of a Windows application running in a Parallels Desktop virtual machine: the speed of the processor in your Mac®, the speed of the hard disk or SSD in your Mac, the macOS® you're running Parallels Desktop in, the Windows OS installed in your VM, the amount of RAM you have allocated to the running VM*, and many more.
